LTL biogas

YCF Series Flare Panel

The YCF Series Flare Panel is the newest, full featured solution for landfill gas management. These controllers use a single Operator Control Station (OCS), capable of multiple functions in a cost effective and familiar design.

Why should the YCF Series be your choice?

- Take advantage of newest technology
- Will work with multiple sensors
- Displays temperature, gas flow, and operating set points
- Multiple alarm outputs
- Data storage and logging with time & date stamp
- Non-volatile memory
- Multiple flares can be monitored by a single OCS
- Can be programmed remotely
- 4" transflective touch screen for long life
- USB programming port
- Monitors battery or line voltage
- Available in AC or DC powered units

Available Options Include:
- Additional input and output capacity
- Cell phone modem
- Radio interface
- Telephone modem
- Wireless capability

Operator friendly screens are easily accessible for display of temperature, gas flow rate, and alarms. Utilizes a transflective touch screen display that is visible in both direct sunlight and low light conditions.
